PUBLIC HEALTH REPORTS.

PLAGUE INFECTION IN SQUIRRELS.

Laboratory experiments have demonstrated that ground squirrels can be infected with plague, and a few cases of such infection have been reported.

On account of the great numbers of ground squirrels in California and other states, their infection, though quite limited so far as a systematic search has revealed, has given rise to reasonable apprehension, and a knowledge of their habits and the best methods of destroying them is deemed of special importance.

Because of their devastating effect upon grain and other crops, the Biological Survey of the Agricultural Department has for a long time made a special study of these rodents, and Doctor Merriam, the Chief of the Biological Survey, has kindly responded to a request to prepare a bulletin giving the information necessary for dealing with these pests from a sanitary as well as an agricultural standpoint.

Attention is particularly called to his statement of the effect of the natural enemies of the ground squirrel upon their prevalence, as well as the proven methods of their destruction by artificial means. These observations have been the result of study and practical methods successfully utilized by the survey. As stated by Doctor Merriam, it is now a matter of importance, both from a sanitary, as well as an economic standpoint, that a systematic destruction of these pests should be entered upon.

CALIFORNIA GROUND SQUIRRELS.

By C. HART MERRIAM, Chief U. S. Biological Survey.

California is overrun with ground squirrels, no less than three genera and a dozen species occurring within its borders. These may be arranged in four groups: (a) the large, long-eared gray ground squirrels (subgenus *Otospermophilus*); (b) the small, short-eared brownish species (genus *Citellus*); (c) the small, white-striped antelope ground squirrels of the deserts (genus *Ammospermophilus*); (d) the golden-mantled ground squirrels of the mountains (genus *Callospermophilus*).

The ground squirrels rank among the most destructive of our native rodents, causing losses to agriculture amounting to at least \$10,000,000 annually. In Oregon, Washington, Montana, and other parts of the West the most harmful species are the short-tailed ones, but in California the only ones of marked economic importance are the long-eared gray or "digger" squirrels. These are relatively large animals, about

the size of the eastern gray squirrel, with upright squirrel-like ears and long bushy tails. Three species occur in the State: (1) The Beechy ground squirrel (*Citellus beecheyi*), which ranges from lower California northward to San Francisco Bay, and east of the Sacramento Valley continues northward to Lassen Butte and Susanville; (2) the Douglas ground squirrel (*Citellus douglasi*), which ranges from the north side of San Francisco Bay northward to the Columbia River; and (3) the Rocky Mountain or Plateau ground squirrel (*Citellus grammurus*), which enters California from the east and in that State is known only from the canyons of the Colorado River and the Providence Mountains on the east side of the Mohave Desert.

THE BEECHEY GROUND SQUIRREL.

The species of greatest economic importance, because of the extent of its range, which covers the greater part of the agricultural lands of the State; because of its destructiveness to grain, nuts, fruit, and other crops; and because of the recent discovery by the Public Health and Marine-Hospital Service that it is a carrier and disseminator of plague, is the Beechey ground squirrel. By reason of this new danger this animal has recently sprung into prominence and demands attention. The danger to human life by the spread of plague so far exceeds in importance the harm done by the destruction of crops that the duty of checking its increase is no longer a local matter but one of national concern.

The Beechey ground squirrel inhabits the open plains of the great interior valley of California, the grassy chaparral slopes of the foothills, and the rocky walls of canyons, and in places pushes up into the more open parts of the yellow-pine forests of the mountains. It lives in underground burrows, usually grouped in colonies. The colonies may be located on the bare, open plains, on the grassy slopes of foothills, or about the roots of trees. The burrows vary from a few to hundreds, and by the union of contiguous colonies sometimes reach a total of thousands and cover almost continuously hundreds of acres. The earth brought up from each burrow is deposited at its mouth, forming gradually enlarging hillocks, so that old colonies on the plain are recognizable at a distance by the mounds. The mouths of the burrows are connected by well-beaten paths, $2\frac{1}{2}$ to 3 inches broad, which radiate from each hole and by intersecting form a conspicuous network, and many of the runways extend for considerable distances into the adjacent feeding grounds.

The animals are diurnal, and in the larger colonies hundreds may be seen at one time, some scudding swiftly over the ground, some rolling in the dust, some basking in the sunshine, and some standing erect on their haunches gazing over the country or biting off the stems of grain, tarweed, or other plants on whose seeds they feed. The seeds not eaten on the spot are tucked away in the cheek pouches and carried home to be kept in underground storehouses for future use. Acorns also are a favorite food and where obtainable are gathered and stored in large quantities. Of cultivated nuts, almonds and walnuts are preferred; of other crops, apples, prunes, peaches, certain garden vegetables, and all the grains are preyed upon wherever they are to be had, and alfalfa is sometimes eaten.

While living mainly on the ground these ground squirrels nevertheless are good climbers, and are often seen in the valley oaks and other nut-bearing trees, and also in fruit trees. They are not migrants in the proper sense of the word, their journeys being limited to short distances, as from one locality to a neighboring one, according to fluctuations of the food supply. Neither do they hibernate in winter, except in the mountains, although in the foothills and valleys they usually remain in their burrows during stormy and severe weather. Nevertheless, over the greater part of the State they are out in numbers every month of the year.

The time of breeding varies somewhat with the region, animals living in the north and in the mountains breeding later than those in the hot country. The young are usually born in April or May. Females containing young have been killed at various dates from March 12 to May 12, and young old enough to run about are sometimes common in April. The number of young at a birth is usually 5 or 7.

Ground squirrels are good to eat, and a few years ago were regularly sold in the San Francisco markets. They have always been prized by the Indians, who roast them over the coals and devour them eagerly. Old animals at times have a rather strong flavor, but the young of the year are usually tender and delicious.

MEANS OF DESTRUCTION.

Among the means of destruction not to be lost sight of are the natural enemies—especially coyotes, badgers, foxes, and the golden eagle.

Ground squirrels may be shot, trapped, poisoned, or they may be killed by certain gases—notably fumes of bisulphid of carbon or burning sulphur—forced into their burrows.

Trapping.—Various traps have been used with success. The ordinary No. 0. steel trap placed unbaited in the mouths of the burrows sometimes yields excellent results, but the best and most humane trap in use at the present time is the so-called guillotine trap—a trap which kills the animal instantly by striking it a heavy blow on the back of the neck. Any food attractive to the squirrels may be used for bait; dried prunes and pieces of sugar beet have proved particularly successful.

Poisoning.—For poisoning the following formula is recommended:

Strychnia sulphate	1 ounce.
Borax	2 ounces.
Crushed wheat, rolled oats, acorn meal, or corn meal.....	20 pounds.

Dissolve the strychnine and borax in 2 quarts of hot water in a closed vessel, stirring occasionally for twenty minutes or until completely dissolved. Then add 4 quarts warm water (in which one-fourth pound of honey may be dissolved) and sprinkle the solution over the crushed grain or meal, stirring or mixing thoroughly until absorbed. Half a teaspoonful of this should be placed close to the entrance of each occupied burrow.

Poisoned whole grain sown broadcast is effective, but kills so many doves, larks, quail, and other valuable birds that it is not recommended.

Ordinary wheat flour and pulverized strychnine, in the proportion of 1 ounce of strychnine to 20 pounds of flour, mixed dry, has proved

efficient in the case of the large Columbia ground squirrel of eastern Washington and is worth trying in California.

Cut pieces of carrot and sugar beet into which crystals of strychnine have been introduced serve admirably to destroy the squirrels in gardens and orchards, but their preparation involves too much labor to be profitable where poisoning on a large scale is necessary.

Phosphorus and cyanide of potassium, owing to the great danger attending their use, are not recommended.

Bisulphid of carbon.—Crude bisulphid, suitable for killing prairie dogs and other burrowing animals, costs about 8 cents per pound in 50-pound carboys or drums. It is a volatile liquid and rapidly loses strength on exposure to the air; hence, it should be kept in tightly corked bottles or cans. It should not be introduced haphazard, but should be used only in burrows where the animals have been seen to enter immediately before it is applied, so that none may be wasted on unoccupied holes. It should be employed in the following manner:

A tablespoonful of crude bisulphid should be poured on a piece of horse manure, corncob, lump of earth, or other absorptive material; this should be thrown as far as possible down the burrow and the opening should be closed immediately. Bisulphid can be used to best advantage after a rain, when the interspaces in the soil are filled with water, so that the fumes are less readily diffused into the surrounding ground.

UNITED STATES.

[Reports to the Surgeon-General, Public Health and Marine-Hospital Service.]

Report from San Francisco, Cal.—Plague-prevention work at San Francisco, Oakland, and Point Richmond, and in Alameda and Contra Costa counties, Cal.—Plague rat found at Oakland.

Passed Assistant Surgeon Blue reports:

SAN FRANCISCO, CAL.

Week ended December 12.

Reports from Los Angeles, Cal.—Examination of animals for plague infection.

Passed Assistant Surgeon Stimson reports, December 9 and 15:

Animals examined in the laboratory at Los Angeles, November 30 to December 6, inclusive:

Ground squirrels	225
Gray rats	227
Black rats	12
Gambel pocket mice	3
Rabbit	1
Total	468

None of these animals was found to be infected with plague.

December 7 to 13, inclusive.

Ground squirrels	252
Gray rats	208
Black rats	20
White rats	6
Gambel pocket mice	2
Rabbits	2

None of these animals was found to be infected with plague.

Report from Seattle, Wash.—Plague-prevention work.

Passed Assistant Surgeon Glover reports, December 14:

Week ended December 12.

Date of finding of last plague rat, September 26, 1908.

Rats received	948
Rats necropsied	893
Plague rats found	0
Plague-infected rats to date	21
Vessels inspected	9
Vessels fumigated	2

STATISTICAL REPORTS OF MORBIDITY AND MORTALITY, STATES AND CITIES
OF THE UNITED STATES—UNTABULATED.

CALIFORNIA.—Month of October, 1908. Estimated population, 2,001,193. Total number of deaths reported to the state board of health, 2,410, including diphtheria 23, enteric fever 60, measles 3, scarlet fever 6, whooping cough 4, and 334 from tuberculosis.

Los Angeles.—Month of November, 1908. Estimated population, 275,000. Total number of deaths reported, 301, including diphtheria 5, enteric fever 5, scarlet fever 3, and 62 from tuberculosis. Cases of contagious diseases reported: Diphtheria 26, enteric fever 22, scarlet fever 47, measles 3, smallpox 1, and tuberculosis 21.

San Diego.—Month of November, 1908. Estimated population, 40,000. Total number of deaths, 44, including diphtheria 1, and 8 from

tuberculosis. Cases: Scarlet fever 5, diphtheria 1, enteric fever 1, and smallpox 14.

INDIANA.—Month of October, 1908. Estimated population, 2,648,594. Total number of deaths, 2,674, including tuberculosis 304, enteric fever 129, diphtheria 43, scarlet fever 4, measles 4, and 7 from whooping cough.

Morbidity: Diphtheria, 596 cases in 49 counties; enteric fever, 464 cases in 72 counties; smallpox, 54 cases in 10 counties; tuberculosis, 304.

IOWA.—Reports to the state board of health for the quarter ended September 30, 1908. Estimated population, 2,500,000. Total number of deaths, 4,455, including diphtheria 297, enteric fever 73, measles 3, scarlet fever 3, whooping cough 46, smallpox 4, and 313 from tuberculosis.

MINNESOTA—*Stillwater*.—Month of November, 1908. Estimated population, 12,435. Total number of deaths, 15, including 1 from tuberculosis. Cases: Smallpox 1, diphtheria 1, and tuberculosis 1.

NEW HAMPSHIRE—*Manchester*.—Month of November, 1908. Estimated population, 64,793. Total number of deaths, 100, including diphtheria 8, enteric fever 1, and 5 from tuberculosis. Cases: Diphtheria 61, enteric fever 6, measles 2, and scarlet fever 3.

NEW YORK.—Month of October, 1908. Estimated population, 8,546,356. Reports to the state department of health show as follows: Total number of deaths, 10,880, corresponding to an annual death rate of 15.3 per 1,000 of the population, including enteric fever 169, measles 13, scarlet fever 50, whooping cough 33, diphtheria 172, and 1,245 from tuberculosis. Cases: Diphtheria 1,805, enteric fever 923, measles 606, scarlet fever 1,254, smallpox 92, and tuberculosis 2,328.

OHIO—*Cleveland*.—Month of November, 1908. Estimated population, 515,000. Total number of deaths, 596, including diphtheria 24, enteric fever 11, whooping cough 1, scarlet fever 4, and 60 from tuberculosis. Cases of contagious disease not reported.

OREGON.—Month of September, 1908. Reports to the state board of health from 34 counties show as follows: Total number of deaths, 462, including diphtheria 6, enteric fever 9, scarlet fever 3, and 30 from tuberculosis. Cases: Diphtheria 34, enteric fever 81, scarlet fever 9, smallpox 32, and tuberculosis 9.

Month of October, 1908. Reports to the state board of health from 34 counties show as follows: Total number of deaths, 399, including tuberculosis 34, enteric fever 20, diphtheria 6. Cases: Tuberculosis 13, enteric fever 77, diphtheria 43, scarlet fever 25, measles 9, and smallpox 52.

PANAMA—*Panama, Colon, and Canal Zone*.—Month of October, 1908. Estimated population, 125,503. Total number of deaths 292, corresponding to an annual death rate of 27.91 per 1,000, including enteric fever 5, malarial fever 22, diphtheria 1, beriberi 8, and 38

from tuberculosis. Of this number 47 occurred among the employees of the Isthmian Canal Commission and Panama Railroad Company, corresponding to an annual death rate of 12.93 per 1,000, of which 7.70 was due to disease, including malarial fever 6, enteric fever 3, and 3 from tuberculosis. Total number of employees, 44,593.

PENNSYLVANIA—*Altoona*.—Month of November, 1908. Estimated population, 60,000. Total number of deaths, 44, including enteric fever 1 and 1 from tuberculosis.

TENNESSEE—*Nashville*.—Month of November, 1908. Estimated population, 124,769. Total number of deaths, 150, including enteric fever 5, diphtheria 2, measles 1, whooping cough 1, and 17 from tuberculosis. Cases: Diphtheria 22, scarlet fever 40, smallpox 1, enteric fever 27, and pulmonary tuberculosis 4.

UTAH—*Salt Lake City*.—Month of November, 1908. Estimated population, 85,000. Total number of deaths, 110, including enteric fever 7, scarlet fever 1, and 10 from tuberculosis. Cases: smallpox 36, scarlet fever 28, diphtheria 15, measles 1, enteric fever 12, and whooping cough 14.

WASHINGTON—*Spokane*.—Month of November, 1908. Estimated population, 90,000. Total number of deaths, 86, including diphtheria 2, enteric fever 2, and 6 from tuberculosis. Cases: Smallpox 3, measles 2, scarlet fever 36, diphtheria 40, and enteric fever 15.

Smallpox in the United States as reported to the Surgeon-General, Public Health and Marine-Hospital Service, June 27 to December 25, 1908.

[For reports received from December 27, 1907, to June 26, 1908, see PUBLIC HEALTH REPORTS for June 26, 1908.]

[NOTE.—In accordance with custom, the tables of epidemic diseases are terminated semiannually and new tables begun.]

FOREIGN AND INSULAR.

CURRENT QUARANTINE MEASURES.

[From the Veröffentlichungen des Kaiserlichen Gesundheitsamtes, Berlin, December 2, 1908.]

CHOLERA.

BULGARIA.—November 15. Permission to load and unload merchandise from Russia extended to include the port of Burgas.

GREECE.—November 15. Sanitary police measures no longer applicable to arrivals from Kertsch, but still in force against other Russian ports.

RUSSIA.—November 20. The governments of Kasan, Kostroma, Olenz, Kaluga, Mohilev, Podolia, Bessarabia, the Black Sea, Bakoo, Stavropol, the cities of Warsaw, Orenburg, Krasnovodsk, Kertsch-Jenikale, and the town of Asov declared free of cholera.

PLAGUE.

AUSTRIA.—November 11. The maritime sanitary police authorities of Trieste removed measures against arrivals from Chile, Venezuela, Ecuador, and Bagdad.

SWEDEN.—November 12. The Chinese ports of Tientsin, Tongku, and Taku declared plague infected, and the ports of Hongkong, Canton, and Amoy declared free of plague.

AZORES.

Report from St. Michael—Recurrence of plague on island of Fayal—Plague on island of Terceira.

Consul Creevey reports, November 25:

It is officially reported that bubonic plague has again broken out at Fayal and the island is declared infected.

To-day I am officially informed that during the first 15 days of this month there were 10 new cases and 5 deaths at the island of Terceira, as against 53 cases and 33 deaths for the month of October.

BRAZIL.

Report from Rio de Janeiro—Inspection of vessels—Mortality—Plague and smallpox.

Acting Assistant Surgeon Stewart reports, November 8:

Week ended November 15. Vessels inspected and bills of health received: November 8, the British steamship *Daghestan*, for New York, with coffee, 3 passengers to work their way, and no other

(1880)

change in the personnel; November 9, the British steamship *Silks-worth Hall*, for some southern port, in water ballast, with no passengers and no change in crew; on the same date the German steamship *Corrientes*, for New York, in cargo of coffee, 3 cabin and 2 steerage passengers, and 1 new member of crew signed here; November 10, the Italian bark *Mona*, for Mobile, in sand ballast, with no change in crew at this port and no passengers; November 11, the British steamship *Riversdale*, for Mobile, in water ballast, with no passengers and no change in personnel; November 12, the Belgian steamship *Canova*, for New Orleans, in coffee cargo, with no passengers and no change in crew; and on same date the British steamship *Rossetti*, for New York, in coffee cargo, with no passengers and no change in crew.

Mortality in city of Rio de Janeiro.—Week ended November 15. Total deaths, 456. Total estimated population, 811,443. Smallpox caused 141 deaths with 311 new reported cases, of which number 86 were in the suburban zone of the federal capital. Plague caused 3 deaths with 7 new reported cases, and there were no deaths nor cases reported due to yellow fever. At the close of the week there were in the Hospital São Sebastião, 260 cases of smallpox and 6 cases of plague; in the Hospital Engenho de Dentro, 103 cases of smallpox, and in the Hospital Paula Candido, 79 convalescent cases of smallpox.

CHINA.

Reports from Hongkong—Quarantine restrictions—Plague—Inspection of vessels—Examination of emigrants.

Acting Assistant Surgeon Hough reports:

Week ended October 24.

Restrictions enforced by Hongkong remain as reported on October 17.

Restrictions enforced against Hongkong remain as reported on October 17.

No quarantinable diseases present.

Vessels inspected and granted bills of health, 4.

Aliens examined for Honolulu and Pacific coast ports: Examined, 668; rejected, 199.

Aliens examined for Philippine Islands: Examined, 29; rejected, 16.

Week ended October 31.

Vessels inspected and granted bills of health, 5.

Aliens examined for Philippine Islands: Examined, 40; rejected, 21.

Week ended November 7.

Quarantinable diseases: Plague, 1 case, 1 death.

Vessels inspected and granted bills of health, 8.

Aliens examined for Honolulu and Pacific coast ports: Examined, 9; rejected, 5.

Aliens examined for Philippine Islands: Examined, 22; rejected, 8.

Report from Shanghai—Inspection of vessels—Smallpox—Plague rats.

Acting Assistant Surgeon Ransom reports, November 10:

During the week ended November 7, supplemental bills of health were granted to 3 steamships having an aggregate personnel of 518. There were inspected 2 vessels and 180 members of crews, and manifests were viséed for 28,974 pieces of freight.

It is reported under date of October 27, that there are no cases of plague at Tientsin or dependent ports.

The general conditions at Shanghai are, so far as quarantinable disease is concerned, good, although smallpox has made its appearance in the foreign community as well as among the natives.

Plague rats at Shanghai.

December 22. Plague rats numerous.

Report from Tientsin—Restrictions at Shanghai against Tientsin removed.

The following is received from Consul-General Williams, under date of October 27:

The authorities at Shanghai have decided to withdraw for the present the declaration of infection made against Tientsin and its dependent ports. No case of plague is reported at either of these places.

CUBA.

Report from Cienfuegos—Inspection and fumigation of vessels—Leprosy.

Acting Assistant Surgeon Suarez reports, December 14:
Week ended December 12:

Vessels inspected.....	2
Vessel fumigated.....	1
Bills of health issued.....	2

The local board of health has reported a new case of leprosy in a town in the vicinity of Cienfuegos. No other quarantinable disease has been reported, and the health conditions of the town and port continue to be satisfactory.

Report from Habana—Inspection and fumigation of vessels—House and water-deposit inspection—Stegomyia calopus present—Smallpox on a coaling vessel at Guantanamo.

Passed Assistant Surgeon Amesse reports, December 15:
Week ended December 12:

Vessels inspected.....	14
Bills of health issued.....	18
Members of crews of outgoing vessels inspected.....	986
Passengers of outgoing vessels inspected.....	609
Vessels fumigated prior to sailing.....	1

The sanitary status of Habana remains unchanged. During the week 9,719 house inspections were made in the city, resulting in the detection of 26 deposits of mosquito larvæ, 10 of which contained wigglers of *Stegomyia calopus*. The work of draining and oiling the marsh lands in the suburbs has been vigorously carried out.

During the month of November 45,592 premises were examined by the sanitary department, and 194 deposits of larvæ were discovered, 109 of these being collections of the larvæ of *Stegomyia calopus*.

December 10, 1908, 4 cases of smallpox were reported among the members of the crew of a coaling vessel which was discharging at

the naval station at Guantanamo. These cases were immediately isolated at Punta Caracoles, adjoining the reservation, and the personnel of the vessel, together with the entire command at Guantanamo, were vaccinated. The collier was remanded to Santiago de Cuba for disinfection.

Reports from Matanzas—Inspection of vessels.

Acting Assistant Surgeon Nuñez reports, December 8 and 14:

Week ended December 5. Bills of health granted to 3 vessels clearing for United States ports in good sanitary condition.

No quarantinable diseases were reported in this district during the week.

Week ended December 12.

Bill of health granted to a vessel bound to Mobile, in good sanitary condition.

No quarantinable diseases were reported.

Report from Santiago—Inspection of vessels.

Acting Assistant Surgeon Wilson reports, December 9:

Week ended December 5. Bills of health issued to 3 vessels bound for the United States. No quarantinable disease was reported.

GUATEMALA.

Report from Guatemala City—Epidemic smallpox.

The following is received from the Department of State, under date of December 21:

A telegram, dated December 19, has been received from the consul-general at Guatemala City as follows:

“Serious epidemic has broken out—smallpox.”

HAWAII.

Reports from Honolulu—Examination of rats for plague infection.

Passed Assistant Surgeon Currie, plague laboratory, reports, November 21 and December 1, through Temporary Chief Quarantine Officer Moore:

Week ended November 21.

Rats taken in Honolulu.....	988
Trapped	822
Found dead.....	1
Shot from trees	166
Examined bacteriologically	739
Showing plague infection	0

CLASSIFICATION OF RATS SHOT FROM TREES.

Mus alexandrinus	69
Mus rattus	58
Total classified	127

CLASSIFICATION OF RATS TRAPPED.

Mus rattus	192
Mus norvegicus	56
Mus alexandrinus	72
Mus musculus	493
Total classified	813
Average number of traps set daily	1,315

Week ended November 28.

Rats taken in Honolulu	799
Trapped	774
Found dead	0
Shot from trees	25
Examined bacteriologically	621
Showing plague infection	0

CLASSIFICATION OF RATS SHOT FROM TREES.

Mus alexandrinus	11
Mus rattus	10

Smallpox in Naples.—During the week ended November 29, 5 new cases of smallpox and 6 deaths were reported at the health office of the city of Naples.

Smallpox in Italy.—Week ended November 29. Cases: Calascio (Aquila) 1, Monte Glavio (Rome) 2, Cinquefronde 3, Radicena 1, Terranova 1, Carida (Reggio Calabria) 16.

JAPAN.

Report from Yokohama—Inspection of vessels—Cholera in Japan and Korea—Outbreaks of epidemic plague on islands of Awaji and Tsushima.

Passed Assistant Surgeon Cumming reports, November 25:

Bills of health were issued during the week ended November 21, to 3 vessels, having an aggregate personnel of 7 saloon and 644 steerage passengers, and 195 members of crews. The steamship *Benarty*, bound for Manila, was fumigated and the crew were bathed and their effects disinfected.

Sanitary conditions continue good, though 2 plague-infected rats were found, 1 November 5 and 1 November 14 in the Hironuma districts.

There have been 16 cases of cholera with 5 deaths in Tokyo, the last cases being reported November 15. They occurred in the slums of the Shinjiku district. Cholera has also occurred in various kens, as follows: Nagasaki 2 cases, Fukuoka 3 cases, Saga 2 cases, and Ohita 7 cases and 4 deaths. In Korea there are reported 33 deaths, 2 recoveries, and 14 cases under treatment, including 2 in Fusan. There has been a violent outbreak on Tsushima Island in the Sea of Japan. Beginning October 20, there were more than 70 cases in about 10 days.

The epidemic of plague at Yura, on Awaji Island, near Kobe, has been very violent, more than 90 cases being reported in one small village of 1,000 houses.

Examination of emigrants.

Number of emigrants per steamship *Asia* for Honolulu, October 28: Advised to wait 1.

Per steamship *Shinano Maru* for Seattle, November 11: Rejected 1; advised to wait 5.

Per steamship *Tango Maru* for Seattle, November 11: Rejected 1; advised to wait 5.

Per steamship *Tenyo Maru* for Honolulu, November 14: Rejected 1; advised to wait 7. For San Francisco, advised to wait 4.

Per steamship *Aki Maru* for Seattle, November 25: Advised to wait 9.

Per steamship *Korea* for San Francisco: Advised to wait 1. For Honolulu, advised to wait 8.

Report from Kobe—Inspection of vessels—Examination of emigrants.

Acting Assistant Surgeon Slade reports, November 20:

During the week ended November 14, supplemental bills of health were granted to 5 steamships and original bills of health to 2 steamships.

One hundred and twenty-three members of crew and 123 steerage passengers were inspected; 91 members of crew and 43 steerage passengers were bathed and disinfected. Their effects were disinfected by steam. The number of pieces of baggage steamed was 304. Manifests were viséed for 62,811 pieces of freight, amounting to 4,313 tons.

Emigrants were examined as follows: Steamship *Tenyo Maru* for Honolulu, passed 36; recommended for rejection 17; for San Francisco, passed 7; recommended for rejection 2.

Reports from Nagasaki—Cholera at Moji and Wakamatsu and in Nagasaki prefecture.

Consul Scidmore reports, October 18 and 24:

At Moji, since September 2, there have been 129 cases of cholera with 79 deaths. Nineteen cases are under treatment. At Wakamatsu, since September 15, there have been 15 cases, with 9 deaths. Three cases are under treatment. In other parts of the same prefecture (Fukuoka), since September 15, there have been 46 cases, with 22 deaths. Seven cases are under treatment.

In Nagasaki prefecture 5 cases were reported at Kuchinotsu on October 11. The port of Nagasaki continues free of infection and energetic measures are in force to prevent its introduction.

Three new cases are reported at Wakamatsu, and a number of sporadic cases have appeared in various parts of this district. Nagasaki continues free from the disease.

MEXICO.

Report from Coatzacoalcas—Inspection of vessels—Sanitary conditions.

Acting Assistant Surgeon Thompson reports, December 10:

Week ended December 9. Seven vessels inspected and passed. The health of the port is satisfactory. No quarantinable disease has been reported.

Report from Mexico City—Yellow fever at Veracruz and Merida.

The following is received from Doctor Liceaga, president of the superior board of health, under date of December 10:

During the week ended December 5, 3 new cases of yellow fever with 2 deaths occurred at Veracruz, and 3 cases at Merida. The usual prophylactic measures were observed.

PERU.

Report from Callao—Inspection and fumigation of vessels—Status of plague in Peru—Smallpox at Lima—Plague at Iquique, Chile.

Acting Assistant Surgeon Gutierrez reports, November 22:

Week ended November 21. One vessel was fumigated and granted a bill of health. There was an aggregate personnel of 118 members of crew, 79 cabin and 75 steerage passengers.

The following is the latest report on plague in Peru received from the Director de Salubridad Publica:

Locality.	Cases Nov. 5.	New.	Recov- ered.	Died.	Remain- ing Nov. 11.
Lima	5	5	1	2	7
Callao	1		1		
Trujillo (city)	40	3	10	5	31
Trujillo (country)		8			
Chepen	11		3		8
Ferreñafe	1		1		
Paita	4		4		
Lambayeque	1				1
San Pedro	6	3		4	5
Monsefu		2			2
Chiclayo		7		6	1

Since my last report no cases of plague have occurred in Callao. There has been 1 case of smallpox in Lima. It was removed to the lazaretto.

Bills of health from Chilean ports report: Two cases of plague in the lazaretto at Iquique; no deaths.

November 18 there were 2 cases of plague at Mollendo.

PHILIPPINE ISLANDS.

Report from Manila—Status of cholera in Manila and the provinces—Cholera on steamship Sexta from Saigon—Inspection of vessels.

Chief Quarantine Officer McClintic reports, November 3:

Week ended October 31, 1908:

Forty-five cases of cholera with 23 deaths, and 3 cases of smallpox with 1 death, were reported for the city of Manila.

The following is a list of the cases and deaths reported as having occurred in the provinces during the week covered by this report:

Province.	Cases.	Deaths.
Rizal.....	34	26
Laguna.....	37	18
Bulacan.....	11	8
Union.....	7	5
Ilocos Sur.....	44	18
Ilocos Norte.....	73	54
Leyte.....	6	1
Pampanga.....	1	1
Cagayan.....	23	10
Capiz.....	21	10
Palawan.....	3	2
Cavite.....	15	10
Iloilo.....	126	68
Occidental Negros.....	206	126
Antique.....	35	8
Total.....	642	335

The total number of cases for the week covered by this report is about 25 per cent less than the number reported during the preceding week. Some of the provinces, however, show an increase in the number of cases; in others, particularly the provinces of Iloilo and Occidental Negros, which have been furnishing a large percentage of the cases reported, the decline has been rather marked. In the provinces around Manila the number of cases has remained about the same as for the preceding week, except in Laguna, where there has been a recrudescence of the disease, there having been 37 cases reported during the week just passed, as against no cases for the week preceding. The disease has made its appearance in Leyte, 6 cases being reported. Cholera has also gradually spread up the west coast of the island of Luzon, and made its appearance in the province of Ilocos Norte, where 73 cases were reported for the week just passed.

October 31 the German steamship *Sexta* arrived at Manila from Saigon with a case of cholera on board in the person of one of the crew. The patient was removed to San Lazaro hospital, and the living quarters of the crew and the decks and closets were disinfected. The vessel was kept in quarantine 2 days, and at the expiration of that time was allowed to unload in quarantine until the expiration of 5 days, when she was released, no more cases having developed. During the week consular bills of health were issued at the port of Manila as follows:

October 25, the United States army transport *Crook*, with 161 in the crew and with 299 passengers, was granted a bill of health for San Francisco, Cal. The crew and steerage passengers were bathed and their effects disinfected and the vessel was partially disinfected at the Mariveles quarantine station. The cargo was either disinfected or passed after inspection. All persons on board were inspected and found well at the hour of sailing from Mariveles, October 26. October 27, the British steamship *Teucer*, with 90 in the crew, en route from London to Seattle and Tacoma, was granted a supplemental bill of health. The cargo was inspected during loading, and 6,072 packages were certified. The personnel was inspected on board at the hour of sailing and the manifests were viséed. October 28, the British steamship *Kennebec*, with 49 in the crew and with 2 passengers, en route

from Hankau to Boston and New York via Cebu, was granted a supplemental bill of health, after the usual inspection of cargo and personnel. October 28, the British steamship *Kaifong*, with 63 in the crew and with 38 passengers, en route from Hongkong and Amoy to Cebu and Iloilo, was granted a supplemental bill of health. The crew and passengers were bathed and their effects disinfected at the Mari-veles quarantine station. The vessel was partially disinfected.

RUSSIA.

Report from Libau—Status of cholera in Russia—Examination of emigrants.

Acting Assistant Surgeon De Forrest reports, November 30:

Cholera cases and deaths.

	Date.	Cases.	Deaths.
St. Petersburg	November 24-28	79	24
Kief (government)	November 22-27	7	3
Tomsk	November 20	2
Bijsk (district)	November 19-25	10	6
Barnoul	November 11-22	28	15
Batum	November 12	1	1
Omsk (city and district)	November 9-24	29	13
Eriwan	November 21-23	29	16
Jelissawetpol (government)	To November 25	454	299
Tver (government)	November 22	10
Etschmiadsin (district)	November 27	1
Schtscherkinov-Bergwich (government Jelissawetpol)	November 26	4
Dorpat	November 25	3
Riga	November 26	2
Moscow (government)	November 22	1

During the week ended November 30 I examined 86 emigrants intending to sail on the steamship *Birma* December 8.

VENEZUELA.

Report from La Guaira—Republic of Venezuela declared free from plague.

Consul Johnson reports, November 18:

The Venezuelan minister for foreign affairs, in an official communication dated November 7, declared the Republic of Venezuela free from bubonic plague. Clean bills of health are now issued to all vessels destined for American ports.

FOREIGN AND INSULAR STATISTICAL REPORTS OF COUNTRIES AND
CITIES—UNTABULATED.

AFRICA—*Lourenço Marquez*.—Month of October, 1908. Estimated population, 10,000. Total number of deaths 46, including 14 from tuberculosis.

Transvaal—Johannesburg.—Two weeks ended October 30, 1908. Estimated population, 180,687. Total number of deaths 159, including enteric fever 3, measles 4, scarlet fever 1, and 30 from tuberculosis.

BRAZIL—Bahia.—Month of October, 1908. Estimated population, 265,000. Total number of deaths, 400, including smallpox 6, enteric fever 3, yellow fever 1, plague 6, and 52 from tuberculosis.

CANADA—Newfoundland, St. Johns.—Two weeks ended November 21, 1908. Estimated population, 30,000. Total number of deaths not given; 2 deaths from enteric fever. Cases: Enteric fever 10, scarlet fever 6, and diphtheria 1.

FRANCE—Calais.—Month of November, 1908. Estimated population, 80,000. Total number of deaths, 23, including scarlet fever 2, diphtheria 2, whooping cough 2, and 17 from tuberculosis.

Toulon.—Month of October, 1908. Estimated population, 105,000. Total number of deaths, 143, including 9 from typhus fever and 2 from diphtheria.

GREAT BRITAIN—England and Wales.—The deaths registered in 76 great towns in England and Wales during the week ended November 28, 1908, correspond to an annual rate of 15.6 per 1,000 population, which is estimated at 16,234,952.

London.—One thousand four hundred and fifty-one deaths were registered during the week, including measles 34, scarlet fever 9, diphtheria 30, enteric fever 10, whooping cough 7, tuberculosis 158, and 32 from diarrhea. The deaths from all causes correspond to an annual rate of 15.8 per 1,000. In Greater London 2,002 deaths were registered. In the "outer ring" the deaths included 6 from measles, 2 from scarlet fever, 15 from diphtheria, and 3 from whooping cough, 4 from enteric fever.

Ireland.—The average annual death rate represented by the deaths registered during the week ended November 28, 1908, in the 21 principal town districts of Ireland was 19.8 per 1,000 of the population, which is estimated at 1,131,959. The lowest rate was recorded in Dundalk, viz, 4.0, and the highest in Portadown, viz, 41.3 per 1,000.

Scotland.—The deaths registered in 8 principal towns during the week ended November 28, 1908, correspond to an annual rate of 16.4 per 1,000 of the population, which is estimated at 1,839,038. The highest rate of mortality was recorded in Aberdeen, viz, 18.4, and the lowest in Paisley, viz, 12.1 per 1,000. The aggregate number of deaths registered from all causes was 577, including enteric fever 1, diphtheria 5, scarlet fever 9, and 16 from whooping cough.

MALTA.—Two weeks ended November 21, 1908. Estimated population, 206,690. Total number of deaths, 190, including enteric fever 1, whooping cough 1, and 6 from tuberculosis.

URUGUAY—Montevideo.—Month of September, 1908. Estimated population, 252,000. Total number of deaths, 384, including enteric fever 1, scarlet fever 3, diphtheria 1, and 52 from tuberculosis.

Cholera, yellow fever, plague, and smallpox, from June 27 to December 25, 1908.

[Reports received by the Surgeon-General, Public Health and Marine-Hospital Service, from American consuls, through the Department of State, and from other sources.]

For reports received from December 27, 1907, to June 25, 1908, see PUBLIC HEALTH REPORTS for June 26, 1908.]

[NOTE.—In accordance with custom, the tables of epidemic diseases are terminated semiannually and new tables begun.]
